Work History

May 2021 - Current

Software Engineer III
Meridian Cooperative, Remote

I develop and support payment and billing software for electric, water, and fiber utilities. My work spans all application layers, including POS devices, customer-facing UI, application servers, and database programming. I utilize .NET, MVC Razor, and AngularJS for development, while employing PL/SQL and T-SQL for database management.

September 2020 - Current

Systems Engineer II
Cosaint Cyber, Remote

I implement Elasticsearch, Kibana, and Logstash configuration files, set up data pipelines for various audit log types (Syslog, Web, etc.) and create custom python and shell scripts to collect and aggregate various types of external reporting (JSON/XML). Identify, design, and implement process improvements for log collection and aggregation: automating manual processes, optimizing data delivery, redesigning infrastructure for greater scalability.

March 2020 - May 2021

Software Engineer III
CACI International Inc, Washington, DC

Working with a dedicated team to develop and support applications for the Executive Office of the President using Angular JS, C#, ASP.NET MVC, Entity Framework, and T-SQL.

August 2019 - March 2020

Mid Application Engineer (Contract)
American College Of Radiology, Reston, VA

Full stack application engineer working with Angular 8, Docker, SQL, .Net Core, and REST Web APIs.
Worked with a small agile team using the latest and greatest frameworks and tools to increase efficiency of research conducted within the medical field.

July 2016 - August 2019

Application Developer II
Applied Technology Solutions Inc., Wilmington, NC

April 2015 - July 2016

Software Engineering Intern
Corning Inc., Wilmington, NC

Education

Bachelor of Science in Computer Science
University of North Carolina Wilmington, Wilmington, NC
